(a1) rel: score vs. measurement, 12 carbon state points
fixed h = 0.015
elbow h*
scale rule, c = 1.4
measured prunable fraction r*
(MAE within 5% of full)
efficiency score f_uniq (predicted unique fraction)
(a2) one fixed bandwidth for every group
Spearman rho(score, r*)
tau = 0.02
tau = 0.05
tau = 0.1
default
fixed bandwidth h
(a3) bandwidth scaled to each group
c in h = c x median NN distance
(b1) abs: score vs. measurement, 12 carbon state points
scale rule, c = 0.3
(MAE within 0.01 eV/A of full)
(b2) one fixed bandwidth for every group
tau = 0.005
tau = 0.01
tau = 0.02
(b3) bandwidth scaled to each group
(c1) rng: score vs. measurement, 12 carbon state points
scale rule, c = 0.42
(MAE within 20% of its range)
(c2) one fixed bandwidth for every group
tau = 0.1
tau = 0.2
tau = 0.5
(c3) bandwidth scaled to each group
